Dear Team,

I am excited to apply for the Data Scientist position . As a recent Master's graduate in Statistics from Pondicherry University with hands-on experience in Machine Learning, Deep Learning, and Data Analytics, I am passionate about turning data into actionable insights that drive business success.

Throughout my academic career, I have built a strong foundation in Python (Pandas, NumPy, Scikit-learn) and SQL, along with practical skills in Power BI for data visualization. Projects such as developing a heart disease prediction model, implementing spam email detection using NLP techniques, and building a CNN-based handwritten digit recognizer have given me practical experience in applying machine learning algorithms to real-world problems. Additionally, my work on pneumonia classification using chest X-ray images strengthened my expertise in deep learning and computer vision using PyTorch.

I am particularly drawn to this opportunity because of its commitment to innovation and data-driven decision-making. I am eager to contribute my skills in statistical modeling, predictive analytics, and data visualization while continuing to grow professionally in a dynamic environment. I am confident that my analytical mindset, technical proficiency, and passion for solving complex problems through data science will allow me to add value to your team.

Thank you for considering my application. I look forward to the opportunity to further discuss how I can contribute to success.

Sincerely,

Abhiram Sreekumar
